

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

14. (currently amended) A carousel for use in conjunction with a database, said database providing data indicative of items to be picked from the carousel to fill orders, comprising:

a drive track;

a plurality of bins arranged into rows, said bins being driven by said drive track;

a drive mechanism for driving said drive track;

a sensor for sensing the position of said rows of bins; ~~and~~

a computer responsive to said sensor and data representative of a plurality of items to be picked ~~picks~~ for more than one order for controlling said drive mechanism; and

a plurality of indicia responsive to said computer, said indicia located adjacent each row as each row is brought into a pick position and wherein said indicia identifies a quantity to be picked.

15. (currently amended) The carousel of claim 14 wherein said computer is responsive to data representative of items to be picked ~~picks~~ for more than one patient.

16. (currently amended) The carousel of claim 14 wherein said computer is responsive to data representative of items to be picked ~~picks~~ for more than one dispensing device.

17. Cancelled

18. Cancelled

19. (currently amended) A system for use in conjunction with a database, said database providing data indicative of items to be picked from a carousel to fill orders, said system [,] comprising:

a carousel comprising a drive track; a plurality of bins arranged into rows, said bins being driven by said drive track; a drive mechanism for driving said drive track; a sensor for sensing the position of said rows of bins; ~~and~~ a computer responsive to said sensor and data representative of a plurality of items to be picked to fill orders ~~picks~~ for controlling said drive

mechanism [,] ; and a plurality of indicia responsive to said computer, said indicia located adjacent each row as each row is brought into a pick position; and

a plurality of storage locations each having an indicator, said ~~computer processor~~ controlling said storage location indicators, said indicia identifying a number of items to be picked and said storage location indicators identifying a storage location to which each of the picked items belongs.

CP 20. (currently amended) The system of claim 19 additionally comprising a dispensing device and a restocking package designed to be one of inserted into and connected to said [a] dispensing device.

21. (currently amended) The system of claim 19 wherein said computer is responsive to data representative of items to be picked [picks] for more than one order.

22. cancelled

23. cancelled

24. (currently amended) A system for use in conjunction with a database, said database providing data indicative of items to be picked from a carousel to fill orders, said system [,] comprising:

a carousel comprising a drive track; a plurality of bins arranged into rows, said bins being driven by said drive track; a drive mechanism for driving said drive track; a sensor for sensing the position of said rows of bins; ~~and~~ a computer responsive to said sensor and data representative of a plurality of items to be picked ~~picks~~ for controlling said drive mechanism;

a printer responsive to said computer; and

a hand-held device for communicating to said computer when a picking of an item [pick] is completed and for displaying another item to be picked [pick].

25. (currently amended) The system of claim 24 wherein said computer is responsive to data representative of items to be picked ~~picks~~ for more than one order.

26. (currently amended) The system of claim 24 additionally comprising a dispensing device and a restocking package designed to be one or inserted into and connected to [a] said dispensing device.

27. (previously presented) The system of claim 24 wherein said carousel additionally comprises a plurality of indicia responsive to said computer, said indicia located adjacent each row as each row is brought into a pick position.

28. (previously presented) The system of claim 27 wherein said indicia identifies a quantity to be picked.

29. (currently amended) A system for use in conjunction with a database, said database providing data indicative of items to be picked from a carousel to fill orders, said system [,] comprising:

a carousel comprising a drive track; a plurality of bins being driven by said drive track; a drive mechanism for driving said drive track; a sensor for sensing the position of said rows of bins; and a computer responsive to said sensor and data representative of a plurality of picks for controlling said drive mechanism; and

a transportable restocking package configured to be filled at said carousel, transported to a dispensing device, and ~~one of~~ attached to ~~and inserted into a~~ the dispensing device.

30. (currently amended) The system of claim 29 wherein said computer is responsive to data representative of items to be picked picks for more than one order.

31. (previously presented) The system of claim 29 wherein said carousel additionally comprises a plurality of indicia responsive to said computer, said indicia located adjacent each row as each row is brought into a pick position.

32. (previously presented) The system of claim 31 wherein said indicia identifies a quantity to be picked.
